The Magnum Heat Torch is a simple and cost-effective method of applying preformed thermoplastic pavement marking materials.

The Magnum Heat Torch with self-contained torch ignition is a wide mouth propane torch for applying preformed thermoplastic pavement markings such as HotTape®. Torch assembly must be used with a D.O.T. approved container equipped with a U.L. listed shut-off valve. It is important to always use the two-hand grip handles to properly direct the flame toward the pavement.

Carefully read and follow the manufacturer's application instructions for proper installation of preformed thermoplastic pavement markings. For complete information about assembly, operation, precautions, and warnings, refer to the “HotTape® Magnum Heat Torch: Instructions For Use and Safety Measures” prior to applying HotTape®.
